

Role: Senior Full Stack Developer

Location: Inner Melbourne

Job Type: Full Time

A SaaS platform to improve global health outcomes

About Praxhub:

Good health outcomes rely on doctors, nurses and other healthcare professionals having timely access to knowledge. Yet across the globe, access to knowledge is a real challenge resulting in poorer outcomes for patients.

Praxhub is a Melbourne-based health technology company developing a SaaS platform that connects healthcare professionals directly with healthcare organisations, education providers, and other healthcare professionals (peer-to-peer). Our clients include global pharmaceutical companies, national private hospital groups, international not-for-profits, and peak medical bodies.

Already in 120+ countries and with thousands of active users, Praxhub has entered an exciting growth phase, in which it is aiming to expand its international footprint and further develop its platform to support the learning needs of global healthcare professionals.

What we are looking for:

Praxhub's mission is to improve global health outcomes; we're 'here for healthcare'. Our foundational technology is already being used in-market and we have an exciting product roadmap ahead. This unique opportunity gives you the chance to be involved in the future growth and development of our elegant and market-leading solution. Fundamentally, this role provides an opportunity for the right candidate to positively and directly impact the health outcomes of patients at a global scale.

To be successful in the role, you need to be a highly technical, passionate, self-motivated and talented software engineer who loves solving tough and challenging problems. The ideal candidate will need excellent analytical and problem-solving skills, critical thinking, and have a passion for creating scalable, reliable and maintainable software systems. You will join a growing team where creativity and strong proactive communication skills are highly valued.

More specifically, the role will involve you:

- Working with the CTO and other key stakeholders in the business to manage and execute development priorities

-
- Supporting the research and analysis of technologies for use in the Praxhub platform and wider business operations
 - Designing and developing complex front and back-end software
 - Designing and developing automated continuous quality assurance and deployment
 - Documenting attributes of the system as required

About you:

To meet the requirements of the role, the ideal candidate will have the following skills and experience:

- Completed a tertiary-level degree in Information Technology (IT) or equivalent course
- Minimum of 5 years' software development experience, including a demonstrated history of full stack development
- Web development experience including responsive UI design
- Proficient in HTML/CSS, TypeScript/JavaScript, Node.js, React, MySQL, REST APIs, Git
- Working with serverless, container-based architectures, including Docker
- Amazon Web Services (AWS) cloud infrastructure/platform experience
- Strong interpersonal and communication skills
- Exceptional problem-solving capability
- Adaptability and a passion for continuous learning
- The ability to self-manage and proactively raise issues/concerns with the team

Does this sound like the ideal role for you?

If so, as a successful candidate you would become a key member of the engineering team working on the core Praxhub application. You will receive guidance and mentoring directly from the company's CTO and be offered a highly competitive remuneration package as well as flexible work arrangements.

To apply for the role, go to <https://praxhub.com/work-with-us> and complete the application form attaching your combined cover letter and CV.

We look forward to hearing from you!
